

Business Performance Overview – Key Insights

Overall Sales Trend

Total sales rose sharply from **₹347K in 2017** to a peak of **₹997K in 2018**, but then declined steadily, dropping to **₹350K by 2020**. This indicates a strong initial growth followed by a slowdown, with 2020 sales returning to near-2017 levels.

Regional Performance Comparison

Among the three regions, **North India** consistently led in sales, contributing approximately **68.6%** of total revenue. **Central India** followed with **26.8%**, while **South India** contributed the least at **4.6%**. This indicates that North India is the dominant market for AtliQ Hardware, while South India may require strategic interventions to boost performance.

Product Category Performance

The top-performing products over the period included *Prod099*, *Prod090*, *Prod077*, and *Prod083*, each leading in profit during their respective years. In contrast, products like *Prod179*, *Prod169*, *Prod206*, and *Prod073* consistently recorded losses, with the lowest performance seen in *Prod073* in 2020. This suggests that while some products consistently performed well, others may require review or repositioning, especially in low-performing regions like **South India**.

Customer Behavior and Engagement

The number of active customers went down from **929M in 2017** to **142.2M in 2020**.

Electrical Stores had the highest revenue each year, starting at **36.1M in 2017** and reaching a peak of **173.1M in 2018**, but then dropping to **65.5M by 2020**.

Customer growth was strongest in **2018**, with good performance from **Electrical Stores**, **Nixon**, and **Electricslslytical**. By **2020**, customer activity slowed down, with lower revenues across the board.

Year-by-Year Fluctuations

From **2018 to 2020**, there was a significant **65% decrease** in total sales.

This drop could be linked to external factors like the **COVID-19 pandemic**, which likely impacted customer demand and business operations.
